

S/R ZONES

System Manual

Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

- Restart your MT4

- Open your favourite chart. Press the right mouse button and pick SR Zones template.

HOW IT WORKS

- Search for charts that are 'clear' (ie. Nice top/bottom peakes, no choppy, short candle-wicks).
- These clear charts respect better the S/R levels, so they give more reliable signals
- Wait until the price approaching a zone
- At the S/R zone look for a signs of a possible break out or reversal
- Two types of typical break-out formation:
 1. Big and definite candle with a strong momentum (faster)
 2. Approaching the zone, the candles are getting smaller and smaller and then breaks through (slower)

- Usually the most reliable case, when price breaks through the zone and then makes a retest (support becomes resistance and vice-versa)
- Reversal signs for example: engulfing, pinbar
- Additional confirmatory factor, if there is a conjunction with any other level (like pivot/fibo..)
- Of course the trend line are also S/R levels that have a slope
- Higher time frames give more significant S/R zones

CUSTOM SETTINGS

Indicator provides settings that can be adjusted to your need.

Among standard settings like history calculations (number of bars for trend lines and S/R levels), custom colors, different styles for trend lines display, we can change also sensitivity of the calculations (recommended: high, as it provides more precise data).

Custom Indicator - PerfectZones_AR ? X

About Common Inputs Colors Visualization

Variable	Value
Bars for trend lines calculations (max: 10000)	5000
Bars for support/resistance zones calculation...	1000
Sensitivity	High sensitivity
Show support/resistance zones	true
Hide support/resistance price labels	false
